Location

Goals

Becoming part of the InterConnect project means having the opportunity to be one of the pioneers of the energy transition in Portugal, while ensuring that energy efficiency, digital solutions and a sustainable future are crucial aspects to your daily life.

The residential pilot will take place in Braga, Porto, Guarda, Santarém, and Évora - covering around 250 homes, close to Modelo and Continente stores (SONAE MC), in order to:

- Explore different energy services for homes, buildings and energy communities;
- Explore interoperable digital platforms for cloud-based energy and non-energy services and hybrid connectivity solutions;
- Validate and promote the flexibility of data exchange platforms and interfaces within the Distribution Network Operators (DNO) infrastructure and the potential for the wide adoption at the EU level.

Technologies and Equipment

Through the Interconnect project, your home will benefit from an Energy Management System that allows you to control the smart appliances that we will provide, like washing and drying machines, heat pumps and others. Why? So that you can enjoy energy-efficient technologies without compromising your comfort and privacy.

In this sense, the project will deliver high-end equipment with high energy efficiency, i.e., **dishwashers, washing and drying machines, heat pumps and water heater controllers** that will be configured remotely, according to the user's preferences.

Check the equipment provided by our suppliers on the project's website:
interconnectproject.eu/pilots/portugal/residential/*

InterConnect app installed on your smartphone (Android and IOS)

The InterConnect app, installed on your smartphone, will enable the monitoring and control of equipment. You will be able to schedule and monitor their operation at your convenience.

Towards promoting better efficiency in the operation of said equipment, the platform managed by the project will also execute commands remotely.

The InterConnect app will become available soon.

**the list of equipment provided by the project is subject to change and stock availability. All exchanges made will include equipment part of the same category, equivalent in terms of energy and recommended retail price.*
